

20,000 m² Paving Area with ROMPOX® - D1

As part of a comprehensive urban renewal initiative, the city of Poznań undertook an extensive refurbishment of its historic center, including the Market Square. The aim was to modernize public infrastructure while preserving the city's cultural and architectural heritage.

Initial Situation and Requirements

The 20,000 m² surface area was to be redesigned to accommodate both aesthetic and practical needs. The city placed particular importance on a jointing solution that could withstand continuous vehicular and delivery traffic, while also complementing the historical surroundings.

ROMEX® Solution

Following consultation with the local ROMEX® representative, the decision was made to use the two-component epoxy jointing mortar ROMPOX® - D1. This product provides high compressive strength, weather resistance, and a visually appealing finish – making it ideal for heavily trafficked, heritage-sensitive areas. The paving stones were sourced from Italy and combined with reclaimed historic cobblestones, ensuring a visually cohesive result. Construction was carried out in phases over two years, allowing urban operations to continue with minimal disruption.

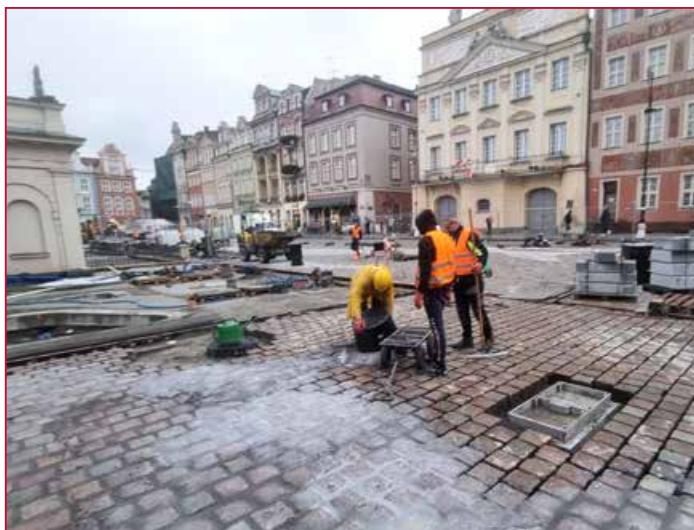

Key Aspects & Success Factors

- Large-scale project covering 20,000 m²
- Combination of Italian granite and reclaimed historic paving
- Durable epoxy jointing system with ROMPOX® - D1
- Sensitive design integration in a historically protected area
- Contribution to cultural preservation and urban modernization

Conclusion

The revitalized city center of Poznań successfully merges tradition and progress. With high-performance materials and thoughtful design, the new paving system offers lasting durability and visual harmony – appreciated by both residents and visitors.

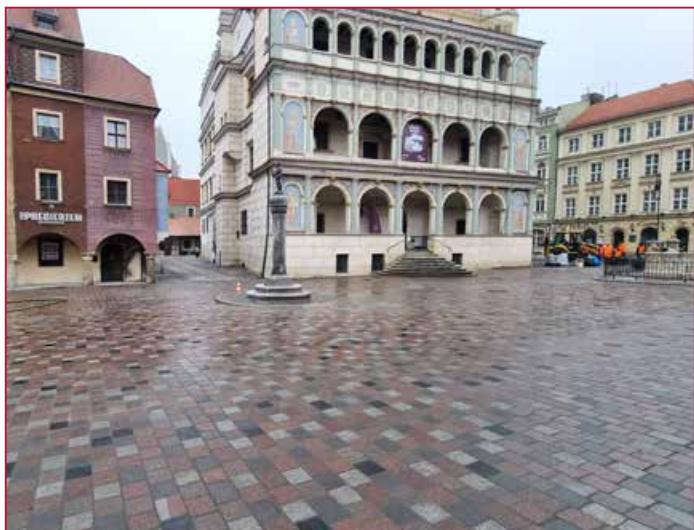

20,000 m² Paving Area with ROMPOX® - D1

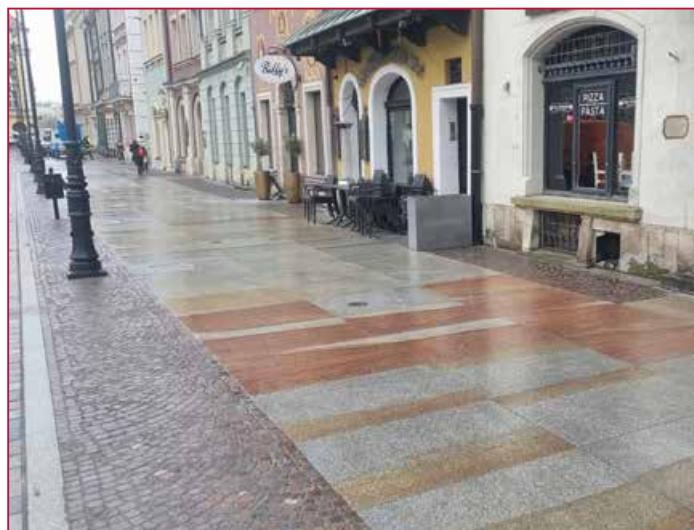

Paving and jointing work

Sweeping off for a clean finish

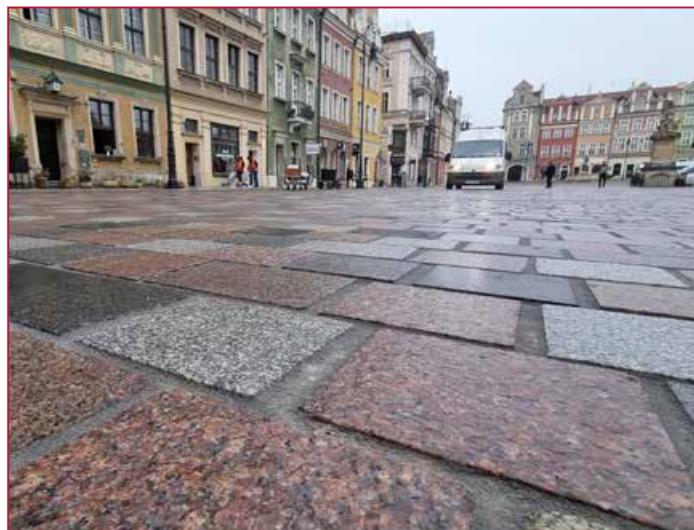

20,000 sqm jointing, firm to walk on

Water-permeable joints

Fixtures perfectly jointed
